<https://github.com/shaneeza-hasnani> | shaneeza-hasnani.com

TECHNICAL SKILLS

Programming & Data: R, Python, SQL, C++, SPSS

Visualization & BI: Tableau, Microsoft Power BI, Excel (Advanced)

Machine Learning: Random Forest, Logistic Regression, Decision Trees, Anomaly Detection, Predictive Analysis

EDUCATION

Master of Science, Business Analytics & AI

American University, Kogod School of Business

Aug 2025 - Dec 2026

Washington, DC

- **Coursework:** Applied Managerial Statistics, Database and AI, Business Intelligence, Predictive Analytics with Machine Learning, Business Insights through Analytics, Quantitative Methods and Data Analysis in Finance, Statistical Machine Learning

Bachelor of Science, Fraud Examination and Financial Forensics

CUNY John Jay College of Criminal Justice

Aug 2022 - May 2025

New York, NY

PROFESSIONAL EXPERIENCE

Schmidt Special Competitive Studies Project (SCSP)

Research Assistant

Jan 2026 - May 2026

Arlington, Virginia

- Built full-stack sponsor intelligence dashboard in Google Apps Script integrating Airtable, Google Sheets, and third-party APIs, enabling the team to quickly access and analyze sponsor data
- Implemented live financial data integration (stock charts, ticker links) into an interactive dashboard, allowing real-time market insights for sponsor evaluations
- Engineered an automated daily email pipeline that aggregated sponsor news from multiple sources and delivered it to the team, ensuring timely information sharing
- Managed action item tracking system for 30+ corporate sponsors, generating weekly leadership summaries.

EduGuide Overseas Pvt. Ltd.

Fraud Data Analyst

Jun 2021 - Nov 2025

Mumbai, India

- Engineered anomaly detection models in Python using Random Forest and Logistic Regression, which identified fraudulent activity earlier and lowered false-positive alerts
- Classified an average of 200K+ high-risk transactions monthly using a self-developed model.
- Enhanced fraud detection accuracy by 25% by applying logistic regression in R and integrating predictive features from transaction data
- Analyzed more than 500 payment datasets monthly with SQL and Python, uncovering patterns that reduced false-positive rates and streamlined review processes
- Reduced suspicious student applications by 20% annually via automated scoring pipelines.
- Designed and automated Power BI dashboards, streamlining review time by 15%.

Guidehouse, Inc.

Financial Crime & Investigative Services Intern

Jun 2024 - Aug 2024

New York, NY

- Developed and optimized fraud detection workflows for over 20,000 ACH and wire transfers using SQL and Python, improving detection efficiency and reducing false positives
- Applied feature engineering and prepared data with SQL scripts and Python pandas, creating a clean dataset that enabled accurate predictive modeling for risk assessment
- Detected more than 50 high-risk transaction patterns using SQL queries and anomaly-detection scripts, enabling the compliance team to investigate and block suspicious activity promptly
- Integrated ML and risk scoring to strengthen compliance monitoring by 30%.

State of New York, Office of the Attorney General, Medicaid Fraud Control Unit

Fraud Audit Intern

Jun 2023 - Aug 2023

Hauppauge, NY

- Identified \$500K+ in recovery anomalies using SQL and statistical validation.
- Leveraged prescriptive analytics to accelerate fraud case resolution by 20%.

PROJECTS

Credit-Card Transaction Fraud Model - Python, Excel

CUNY John Jay College of Criminal Justice

Oct 2024

New York, NY

- Engineered Random Forest and Decision Tree classifiers on 10,000+ real-time transactions.
- Attained 99.96% accuracy and 97.25% recall for abnormal payment detection.

CERTIFICATIONS

- **Certified Fraud Examiner (CFE): 2025**
