Shaneeza

Washington, DC | (210) 935-7217 | hasnani.shaneeza@gmail.com | https://www.linkedin.com/in/shasnani | github.com/shaneeza-hasnani | shaneeza-hasnani.com

Summary

Data scientist with experience developing classification models in Python and R, automating research workflows, and analyzing large datasets. Project work includes clustering, association rule mining, regression, and feature engineering. Completing an M.S. in Business Analytics and AI with a concentration in Data Science and Statistics in December 2026.

Skills

Programming: Python, R, SQL, C++
Machine Learning: Classification, Random Forest, Logistic Regression, Decision Trees, Anomaly Detection, Predictive Modeling
Statistical Analysis: Statistical Modeling, Exploratory Data Analysis, Hypothesis Testing, Data Validation
Data Engineering & Tools: Snowflake, pandas, Jupyter Notebook, VSCode, RStudio, Git, GitHub
Visualization: Tableau, Power BI, Excel

Education

Master of Science, Business Analytics and AI | Concentration in Data Science and Statistics **Dec 2026**
Kogod School of Business, American University *Washington, DC*
- **Coursework:** Statistical Machine Learning, Advanced Text Analytics, Databases and AI, Business Intelligence, Predictive Analytics

Bachelor of Science, Fraud Examination and Financial Forensics Minor: Computer Science **May 2025**
CUNY John Jay College of Criminal Justice *New York, NY*

Projects

Fraud Detection Pipeline | Snowflake, SQL, Feature Engineering
- Built a three-layer SQL pipeline to transform 6.3 million synthetic PaySim transactions into analysis-ready records and rule-based fraud scores, engineering indicators from account-balance changes and transaction types.
- Evaluated fraud concentration across four risk tiers against dataset labels; the HIGH-risk tier contained 3,912 fraudulent transactions among 5,145 flagged records, yielding 76% precision compared with a 0.13% dataset fraud rate.

Market Reaction to Corporate Fraud Disclosures | Python, pandas, statsmodels, SciPy
- Implemented a Fama–French three-factor event study using OLS regression to estimate expected stock returns and calculate abnormal returns around corporate disclosure events.
- Applied cross-sectional t-tests, Wilcoxon signed-rank tests, and binomial sign tests to examine abnormal returns, producing visualizations of daily and cumulative market reactions.

Work Experience

Schmidt Special Competitive Studies Project (SCSP) | *Research Data Analyst* **Jan 2026 - May 2026**
- Built a company research dashboard in Google Apps Script covering 50+ companies, integrating news APIs, publicly available financial data, and Airtable records; reduced average meeting preparation from approximately three hours to one based on observed use.
- Integrated Gemini with OpenAI as a backup to generate company summaries and suggested discussion points on demand, and turn meeting notes into proposed next steps and draft follow-up emails.
- Cleaned and reconciled Google Sheets and Airtable data by removing duplicates, resolving inconsistent company names, correcting incomplete records, and standardizing fields; connected the systems through APIs to support dashboard and task-tracking workflows.
- Automated weekly action-item reporting across SCSP and company commitments, delivering completed and outstanding tasks to the entire team each Monday; refined the tools through user feedback, with the dashboard remaining in use after the role ended.

EduGuide Overseas Pvt. Ltd. | *Data Analyst* **Aug 2024 - Dec 2025**
- Analyzed student application, payment, document, and consultation records using SQL, R, and Python to identify recurring payment irregularities and repeat consultations, informing application-screening rules and risk indicators.
- Developed a predictive risk-scoring model using labeled historical cases, flagging applications scoring above 7/10 for human review; incorporated staff-verified outcomes into subsequent training and adjusted screening rules as new patterns emerged.
- Integrated risk scores and interactive Flourish visualizations into the employee portal, enabling staff to review application screening results.
- Helped reduce monthly manual reviews from approximately 20 to eight through risk-based screening and revised procedures, at comparable application volume.

Guidehouse, Inc. | *Financial Crime and Investigative Services Intern* **May 2024 - Aug 2024**
- Analyzed 20,000+ synthetic wire transfers in Excel for a five-person capstone, developing formula-based risk indicators using transaction amount, time of day, and origin to identify approximately 10 potentially high-risk patterns.
- Built a Tableau dashboard to visualize transaction patterns and risk findings, and presented the team's analysis to 15 stakeholders and partners; partners identified one recommendation they intended to implement.
- Traced transaction flows and account relationships to support a money-laundering investigation, helping the case team examine the movement of funds.

NYS Office of the Attorney General, Medicaid Fraud Control Unit | *Audit Intern* **May 2023 - Aug 2023**
- Identified financial discrepancies and calculated associated amounts across four Medicaid fraud investigations, contributing to findings totaling more than $500,000 in potentially improper payments.
- Synthesized recorded calls and case notes into timelines and categorized findings, comparing statements with financial records to identify inconsistencies and support case development.
- Used Excel formulas, lookups, pivot tables, and reusable templates to organize and reconcile case records, reducing repetitive analysis and preparing findings for legal, financial, and investigative teams.

Certifications

- Certified Fraud Examiner (CFE)
- Microsoft Office Specialist: Excel Expert
- Microsoft Certified: Azure AI Fundamentals
- UiPath Academy Agentic Automation Developer Associate
- SQL Associate: DataCamp
