Professional Summary

Data Scientist completing an M.S. in Business Analytics and Artificial Intelligence (Dec 2026). Experience building predictive risk-scoring tools, analyzing transactional data, and automating research workflows using Python, SQL, and R. Projects span machine learning, statistical inference, and fraud detection.

Skills

Data & Programming: Python (pandas), R, SQL, Snowflake, Git, Excel, Tableau, Power BI
Modeling: Classification, clustering (K-Means, hierarchical), decision trees, association rules, feature engineering
Statistics & Tools: OLS regression, hypothesis testing, model evaluation, Jupyter, Google Apps Script

Projects

LinkedIn Job Skills & Salary Analytics / *R, K-Means, Apriori, Decision Trees, Regression*

- Integrated job, skills, industry, and salary datasets; standardized compensation and engineered skill indicators to analyze labor-market patterns.
- Applied clustering, association rule mining, decision trees, and regression with interactions to examine skill bundles, job profiles, and salary relationships.

Market Reaction to Corporate Fraud Disclosures / *Python, statsmodels, SciPy*

- Built a Fama–French three-factor event study across 24 firms using OLS to estimate abnormal returns; measured −23.5% cumulative average abnormal return by Day +10.
- Tested significance using parametric and nonparametric methods; checked robustness with alternative event windows and model specifications.

Fraud Detection Pipeline / *Snowflake, SQL, Feature Engineering*

- Built a three-layer SQL pipeline processing 6.3M synthetic PaySim transactions; engineered balance-change and transaction-type indicators for rule-based fraud scoring.
- Validated four risk tiers against labels: HIGH risk contained 3,912 fraud cases among 5,145 flagged transactions (76% precision) versus 0.13% overall prevalence.

Professional Experience

Schmidt Special Competitive Studies Project (SCSP) / *Research Data Analyst* Jan 2026 - May 2026

- Built a Google Apps Script dashboard combining news APIs, financial data, and Airtable records for 50+ companies; reduced average meeting preparation from approximately 3 hours to 1.
- Reconciled duplicate and inconsistent company records across Sheets and Airtable; connected systems through APIs to improve data reliability.
- Integrated Gemini and OpenAI for research summaries and follow-up drafts; automated weekly team action-item reporting.

EduGuide Overseas Pvt. Ltd. / *Data Analyst, Remote* Aug 2024 - Dec 2025

- Analyzed application, payment, and consultation records using Python, SQL, and R to identify irregularities and repeat patterns relevant to screening.
- Developed a predictive risk-scoring model from labeled historical cases; flagged scores above 7/10 for human review and incorporated staff-verified outcomes into subsequent training.
- Embedded risk scores and visualizations in an employee portal, helping reduce monthly manual reviews from approximately 20 to 8 at comparable application volume.

Guidehouse, Inc. / *Financial Crime & Investigative Services Intern* May 2024 - Aug 2024

- Analyzed 20,000+ synthetic wire transfers using Excel risk indicators based on amount, timing, and origin; identified approximately 10 potentially high-risk patterns.
- Built a Tableau dashboard and presented team findings to 15 stakeholders and partners.

NYS Office of the Attorney General / *Medicaid Fraud Control Unit Audit Intern* May 2023 - Aug 2023

- Examined financial records across four Medicaid fraud investigations, contributing to findings of $500K+ in potentially improper payments.

Education

American University / *M.S., Business Analytics & Artificial Intelligence; Data Science and Statistics* Dec 2026
CUNY John Jay College of Criminal Justice / *B.S., Fraud Examination & Financial Forensics; CS Minor* May 2025

Certifications

Certified Fraud Examiner (CFE) | UiPath Agentic Automation Developer Associate | Azure AI Fundamentals | DataCamp SQL Associate
